Clientele

What We Do

TPS, aiming at revolutionizing the conventional banking, excels in the provision of comprehensive and innovative payment solutions for financial and non-financial sectors. Our diverse expertise in card and payment systems has now stepped into the arena of digital banking, covering a wide spectrum of online banking services. Starting from molding a system as per clients' requirements to approaching the phase of project management and site integration, TPS believes in shaping high-end financial applications for today and tomorrow.

R&D

12.5% of annual revenues are invested in Research & Development to keep up to the speed of evolving channels

Product Releases

We follow the agile development methodology with a Scrum framework for managing product development. Every product has 3 planned releases in a year

Open APIs

New releases of products are built around open API framework. Fintech companies can use our APIs to offer new products and services to financial institutions
